

Trades caravan

We had the privilege of attending a trades caravan in our establishment organized by comilog.

As a result, we were able to meet the French ambassador .

And also several engineers and doctors who explained their jobs to us in order to "make us dream", and above all to help students who do not yet have any ideas about the jobs they can do later.

- Today we are with: Nadirah; Assetou; Noellie; Texia; and Madelina. And we're going to tell you a little about what each of us learned from this experience:

-Nadirah(journalist): So girls, can you tell me if this day really allowed you to “dream”?

-Assetou: ohh yeah! this day was really beneficial to me because thanks to it I was able to discover several other professions that I was unaware of, it was fascinating, and it allowed me to dream.

- Noellie:I was going to say the same thing. it was amazing and very inspiring

-Texia: really for me this day was very interesting.wow the trades sector is very vast and offers us several opportunities.

-Madelina: Obviously it allowed me to dream all this too! everything was so inspiring. Besides girls, among all these professions presented, which was your favorite?

- Nadirah : personally I appreciated each profession presented, each of them had their own universe. But the one that I liked the most was the profession of Geophysicist. it's exciting.

-Assetou: I am of the same opinion as Nadirah. I also have a preference for the profession of Geophysicist because for me it is already very interesting, and it is a profession in which we carry out several activities that I really like, for example, research in nature or even physics. chemistry etc... it's fascinating to me.

- Noellie : For my part I particularly

interested in planning , because in planning we must calculate in the long term and in the short term the amount of manganese that we must sell and find in the soil .

-Texia : And for me , the profession that inspired me the most is that of topography. Because , in topography we must use several devices to predict the mass of manganese in the earth.

- Madelina: ohh great girls I see you already have really have preferences regarding these professions presented. But is this really the job you want to do later?

- Texia: not necessarily, it could be a second plan later

-Noellie : I agree with texia, for example,

when I grow up I would like to be a petroleum engineer because it is a childhood dream. but that doesn't stop you from always having a second plan.

-Assetou: Indeed, that's exactly it girls, I completely agree with you. I too have a first choice regarding my job later, but you always have to look for a second choice just in case. So dreaming is a good thing.

-Nadirah: In the end, girls, this type of experience is very enriching and advantageous for us. and I hope that we can still have this kind of visit this year.!

Thank you for your attention!!!
