

THE CARAVAN OF JOBS, A HOPE FOR THE FUTURE

By SHAMI Michaella, NDJOURI Alliance, KAWANGH Lisa, BOUKOYO Merveille, MBIRA Sara, OKONKWO Ivy, BIDAMBA Esmera and ONGOUNGOU Jemima

Wednesday 20th November

2024 was organized the famous **Caravan of Jobs** by the COMILOG (Compagnie Minière de L'Oogoué) for students of Henri Sylvoz High school students to help them to have a better idea of their future career and introduce them to the multiples careers the COMILOG can offer to them on their adulthood.

The caravan of Jobs was mainly planned by Mrs. JESSICA who is the main chief of the management staff, her job is to take care of everything : from the number of chairs to the music or even the repartition of the volunteers by classes .

And with her were also almost a Large number of volunteers, fathers And mothers of families who nicely accepted to give us some of their time to explain us their career inside of the COMILOG, from surgeon to civil genius or even management.

Now, we are going to talk about the 3 sectors of the Caravan of Jobs .

The three largest sectors within the COMILOG are: **1st the sector of science and healthcare**, in **2nd the sector of administration**, and in **3rd** is one of the most famous sectors, **the sector of engineering**.

All of these three sectors are the biggest sectors of jobs offering inside of the COMILOG and offers the best jobs and opportunities of careers that a high school students, a bachelor or intern can dream.

Of course for gain this honor, we must do a lot of sacrifices and efforts but the gain is worth it like thanks to the volunteers we were able to see and learn:

The COMILOG has a big politic of formation of healthcare and security for their employees because like we know, the COMILOG is a manganese centered industry that is working on an open air mine.

The conditions of work for workers can be very dangerous(accidents on work, contact with toxic substances, injuries or illnesses) and that why

They invest a lot of money in the formation of sciences and healthcare centered careers.

By example during the two hours we were with volunteers, they shared to us some amazing jobs like: **surgeon, radiologist, biomedical doctor or medical secretary**.

All of these jobs needs at least 10 years or more and a lot of expertise and are extremely.

THE CARAVAN OF JOBS, A HOPE FOR THE FUTURE

That shows the prestige of these
professions.

By example, some of
the main careers that
you can find in
administration are :

**Support
professions,
industrial
buyers/supplier,
communication
manager, Digital
communication
administrator,
accountant...**

All of these
professions years of
studies can be count
between 2 and 5
years.

The administrative sector is the sector
that take care of the organization and
management of a structure
(like COMILOG).

Without this sector, things would be way
more difficult to classify.

The great majority tends to say that
administrator is not a big deal or an
important role inside of a structure but they
ignore that without them, there would be a
pretty big mess inside the papers or the
distribution of work.

That sector is very appreciated because of
the small need of year of study in opposition
to the sciences and healthcare sector and in
Gabon, like 78% of young graduated
students choose literary studies to work in
administration.

For the sciences and
healthcare jobs, we can
study in Gab'Campus or in
L'Ecole Supérieure de
Médecine Appliquée et de
Pharmacie (ESMAP) in
Bitam, or even go to
another country :
Equatorial-Guinea or
Cameroon where Gabon
have

And for the administrative
jobs, you can go in l'Ecole
Nationale
d'Administration in
Libreville where are
trained senior
administrative executives
in Gabon, or in the
Université Omar Bongo
(UOB).

THE CARAVAN OF JOBS, A HOPE FOR THE FUTURE

And now, we will talk about the section of the future because like Mrs. JESSICA said at the beginning, engineering are creators and without trying to being rude, Gabon and COMILOG needs more creators that classifiers.

Engineering is easily one of if not the most important sector out of all COMILOG...Engineers are at the origin of the construction are the development of a country.

If you see countries like USA or Singapore now, it because engineers worked on it.

And some of the infrastructures in Henri Sylvoz High School are here because of engineers.

In the engineering sector...

Many careers that are very well paid off can be found in the COMILOG :

Like civil genius and mechanical or even amazing careers that you probably never heard of but that exist like topography (a profession that consist of creating plans and maps), geophysics that is simply the study of the physical characteristics of the Earth (or other planets), and metallurgy what is without irony what the Group Eramet consist of.

To apply for one of these jobs, an engineer student must study for 5 to 8 years in engineering and scientific university.

With the rise of technology in our days, we expect that a whole new kind of profession will rise in the engineering sector: **the computer genius.**
