

ECO BOSS LADIES TALK SHOW

How Technology and the Media help us communicate Climate Change.

Our work focuses on climate change. A major challenge today is to address it using a tool that is being used more and more: technology.

Firstly, we can raise awareness through various media, such as television and social networks, to educate people on the actions to be taken against it.

Like this window through which we're speaking to you.

Technology such as the phones we use in class or computers allows us to communicate on platforms. Digital technology is in the modern age; thanks to the projector, we will be able to convey an idea of our work.

Finally Thursday, we will also present a drawing to illustrate all of this.

Stay tuned to our show on Thursday to learn more about climate change and the role of technology in combating it.

Rubbie

Hello everyone and welcome to our talk show!

Lise

Hey guys, we are Lise, Rubbie and Precyla. Today we are going to talk about climate change.

Precyla

In this debate, we will talk about the causes, the consequences and the solutions.

Lise

We will also ask: Can smart technology help fight climate change?

Rubbie

Climate change is the increase of Earth's temperature because of pollution. It is caused by greenhouse gases like CO₂.

Lise

Yes, cars, factories and planes produce a lot of pollution. This makes the Earth warmer.

Precyla

Climate change has many consequences. For example, ice is melting and sea levels are rising.

Rubbie

Do you think smart technology can help fight climate change?

Lise

Yes, I think technology can help. For example, solar panels produce clean energy. Wind turbines also create renewable energy.

Precyla

I agree, and electric cars reduce pollution from transport. not true, Rubbie?

Rubbie

That's true, but is technology enough? What do you think about Lise?

Lise

No, it is not enough. People must also change their habits.

Precyla

For example, this paper cup is recyclable. If we recycle, we reduce waste and pollution.

Rubbie

So, smart technology can help, but everyone must act. In the classroom, we also have several tools to convey the message of the fight against climate change. Using AI, we generated a poster on this topic. We also achieved this through these little words on the wooden boxes.

Everyone

We must protect our planet and fight climate change!

Rubbie

Thank you for staying until the end and hello home!

Vocabulary – Climate Change

Climate change → changement climatique
Wind turbines → éoliennes
Smart technology → technologie intelligente
Greenhouse gases → gaz à effet de serre
Solar panels → panneaux solaires
Clean energy → énergie propre
