

# Podcast: Tomorrow's Classroom: How Science Is Reinventing School by Loïs

## 1) Dialogue

**Sarah:** Hi everyone, and welcome to our podcast Tomorrow's Classroom. Today, we are talking about how scientific innovations are changing the future of school.

**Noah:** Yes, and honestly, school is evolving faster than ever. Thanks to science and technology, students can learn in smarter, more interactive ways.

**Sarah:** For example, artificial intelligence can now help students understand difficult lessons. If a student is struggling in math, an AI tool can explain the exercise step by step.

**Noah:** That's true. It can also adapt to each student's level. In the future, learning may become more personalized.

**Sarah:** Another innovation is virtual reality. Imagine studying history by visiting Ancient Egypt with a VR headset.

**Noah:** That would make lessons more exciting. Scientific tools can bring lessons to life.

**Sarah:** We can also talk about connected devices, like tablets and smart boards.

**Noah:** And don't forget robotics. Students learn to build and program robots.

**Sarah:** Science is also improving inclusion at school.

**Noah:** Innovation should make school more accessible for everyone.

**Sarah:** However, there are still challenges like screen time.

**Noah:** Technology should support education, not replace teachers.

**Sarah:** The school of the future will combine human values and science.

**Noah:** Science improves learning and prepares students for tomorrow.

**Sarah:** Thank you for listening.

**Noah:** See you next time!

## 2) Verbs and phrases from the dialogue

To evolve = évoluer → School evolves with technology, like we see today.

To struggle = avoir du mal → Some students struggle in math, so they need more help.

To adapt = s'adapter → AI adapts to each student, which is really useful.

To explore = explorer → With VR, students can explore places without moving.

To improve = améliorer → Technology improves learning, but it's not perfect.

Thanks to = grâce à → Thanks to technology, school is more interesting now.

Step by step = étape par étape → The app explains the lesson step by step, so it's easier.

In the future = dans le futur → In the future, maybe school will be very different.

Bring lessons to life = rendre les cours vivants → Videos bring lessons to life and make them less boring.
